# HYDRATE CONSERVE SAVE

Just as your body needs moisture to stay healthy, so does your home. Air that's too dry can act like a giant sponge, soaking up moisture from everyone and everything in your home, including woodwork, wood floors and furnishings.

And it takes a toll. Dry skin, chapped lips, dry nasal passages and static electricity are just some of the dry-air symptoms that can lead to discomfort.

## User-Friendly Meets Eco-Friendly

**The ideal humidifier should treat your whole house, improve comfort, reduce energy costs, conserve water, operate quietly and be easy to maintain. Only Honeywell advanced and fan model humidifiers do it all.**

**Whole-House Comfort** — Maintain a comfortable humidity level throughout your entire home.

**Water and Energy Savings** — Both the advanced and fan TrueEASE models offer water-saving features — ask your contractor for details. And because humidified air feels warmer, you can save on energy bills by turning down your thermostat while still feeling comfortable.

**5-Year Warranty** — The kind of assurance you'd expect from a trusted home comfort name like Honeywell.

**Act Now!** Improve your comfort and protect your home!
